## PREFACE

The student who attempts to use "Grevillea" soon discovers that its valuable contents are not readily available, owing to it not being sufficiently indexed. It has no specific index of the text or illustrations. A topical index appears in each volume, except the sixth, in which it is missing. These have not been placed in regular order. Some are in the front, others in the middle, or back of the volumes. To supply this defect, an index of indexes has been made. Next appears a specific index of the illustrations, supplemented by a tabulated record of the page and volume containing the desired information or descriptions of each plate. Without an index, the 185 plates possess little value, as the inscription under many of them was only that of the country in which the specimen or collection was found, as "Australian" etc. To gain any information of such, the reader was obliged to first search through the topical indexes for that particular collection, and when there were a number of that kind, as was frequently the case, the search must be continued through numerous pages of several volumes ere the desired reference to the plate was discovered. When found, a tabulated record was made of the page and volume containing the desired information or descriptions of the plates.

(2)

The intention first was to make a specific index of only the fleshy fungi, but numerous other kinds have been included. Specimens noted, but not described, have generally been omitted.

Librarian,

MINNESOTA MYCOLOGICAL SOCIETY.

Oct. 1909.

W. C. Abbott?
